

Coding Enthusiasts (m/f)

ABOUT YOU

You keep track of everything and also your goal in mind. Abstract problems are exciting challenges for you. You love working on conceiving and implementing solutions for technical problems. You value individual responsibility and want to convince by developing own ideas for complex tasks.

You see yourself as a software engineer, who is willing to develop mobile applications as well as web technologies and is also interested in defining API's. Theory and specialist knowledge are not enough for you. That is why you already realized own projects in your free time or at first work experiences. You are longing to put digital solutions of tomorrow with a young and agile team into practice?

If that sounds like you, you have come to the right place!

ABOUT MATCHWERK

Requirement determination, conceiving and implementing, commissioning, and replacing of old systems - we continuously accompany our customers by reaching their goals.

We support our clients throughout all their phases and at all points of contact with their customers. Our guiding principle is to treat every client individually and to make them more successful with our skills and solutions!

As a software engineer, you can expect broad subject areas. It can range from developing an individual project execution for automatizing operative activities, to digitizing the customer communication, to developing native apps. We offer an exciting playing field to give you the possibility to constantly grow.

WE EXPECT

- Studying at least three semesters of the following courses of study: computer science, information systems or mathematics
- At least 18 months (all in all) experience in implementing software applications (native apps, web apps or JAVA applications)
- The willingness to resident in Leipzig or surroundings

YOU CAN EXPECT

- An exciting project setting with well-known customers, young start-ups and mid-sized companies
- Leading your own projects and promoting your customers in your field of responsibility
- In the medium term full responsibility for a branch office as accountable site manager

YOUR SKILLS

- Experience in collaborative software development (project planning, ticket systems, versioning systems, especially Git, build server, unit- and integration testing)
- Safe handling of modern web technologies like JavaScript, HTML and CSS
- Basic knowledge of database systems (SQL)
- Experience in handling Linux servers
- Work experience in server-sided development with at least one language (Java or NodeJS preferred)

Maybe you can support us with following skills as well?

- **Web:** React, Redux
- **Server:** Spring (Java), ExpressJS (NodeJS), Typescript, Wordpress (PHP), Symfony
- **App:** React-Native on Android and iOS
- **DevOps:** Docker, Ansible, Jenkins

WE OFFER

- The possibility to develop quickly within a young and constantly growing company.
- An easy work atmosphere, that is focussed on outcomes not minutes.
- Targeted support of your skills.
